M.Sc. (Statisti
Topic 3 Use o

1) Consider data sets named `table` `table5` from `tidyr` library in for four variables, `country`, `y` organizes the values in a differe
   a) Compute `rate` per 10,000 w
   b) Compute `cases` per `year` w
   c) Use appropriate function to g
   d) Combined the tidied version
   e) Use `table3` dataset to `population` columns.
   f) Combine a `century` and `ye`
2) Use the data from following link library in R.
   https://github.com/arunsrinivasan
   a) Read the data from a web l
   b) Describe the data.
   c) Check the format of data a
   d) Select the columns named,
   e) Drop the columns named '
   f) Rename the variables 'c 'origin.of.flight' res
   g) Suppose we want to find a
   h) Filter all the flights whose
   i) Filter all the flights whose
   j) Sort the data with respe descending order.
   k) Sort the data first by or 'carrier' on descending
   l) Add new columns name `arr_sch` which is `arr_ti`
   m) Create a variable `flag` wh
   n) Calculate mean, median, m
   o) Calculate the mean arrival
   p) Calculate the mean of arri 'origin' column.
   q) Remove the duplicates val
   r) Remove the duplicates val
   s) Extract the last row within
   t) Calculate the total number
